Dear Madam/Sir,

Much obliged to you for providing a chance to apply for the SOFTWARE ENGINEER Role at JP Morgan Chase and Co.

After going through the description for the role, it is clear that you are looking for an applicant that is highly motivated and has the zeal for developing technologies. Given these necessities, I accept that I would be ideal for the role and be an asset to your association. I'm a quality-oriented individual and like to deal with challenging undertakings that expect me to learn new things and work outside my usual range of familiarity.

I have a decent grasp of native android application development and a good understanding of data structures and algorithms. I have also worked as an SDE Intern (Android) at Rivi Ventures Pvt. Ltd where I have worked on an AI-based trip planner app. I made contribution to development and redesign of various app modules that resulted in enhanced user experience.

I have experience with a variety of Android concepts like MVVM, Navigation Components, Coroutines, Broadcast Receivers, and local storage using RoomDB. For the backend, I have experience in Firebase (Auth, Firestore/Realtime Database, Cloud Messaging) , MongoDB and NodeJs.

I have attached my resume that lists my projects and skills.  
I can be reached on +91-7217818288 or on chachraanubhav@gmail.com

Sincerely,  
Anubhav Chachra
